

τ Linear Servo Motor

τ Linear Servo System realizes high quality and high performance machines.

Nikki Denso Co., Ltd.

τLinear Servo Motor

τLinear Servo Motor

Rich Lineups Satisfying Various Applications

Coreless NVA Series

High-performance type providing speed stability, space saving, fast acceleration, and the like

Coreless NLD Series

Economic class standard type having highly efficient magnet arrangement and best suitable for long strokes

Coreless and Core NLA Series

Wide-ranging type supporting lineups from rated thrust 7N (coreless) to 1500N (core)

Providing High-Precision and High-Speed

High-precision, high-speed positioning with the In-house production interpolator unit (IPU)
Resolution 20 nm, maximum speed 1.6 m/s (for details, see p.16 to p.18.)

Enabling Water-Cooling and Air-Cooling

Water-cooling and air-cooling types available as a dedicated use
If you have a request for this, contact our sales representatives.

Enabling Increase in Absolute Position Precision after Device Insertion

Positioning precision can be increased by incorporating position measurement data into the combined servo driver.
Absolute position correction function option (for details, see p.20.)

Providing Scaleless Linear Sensor

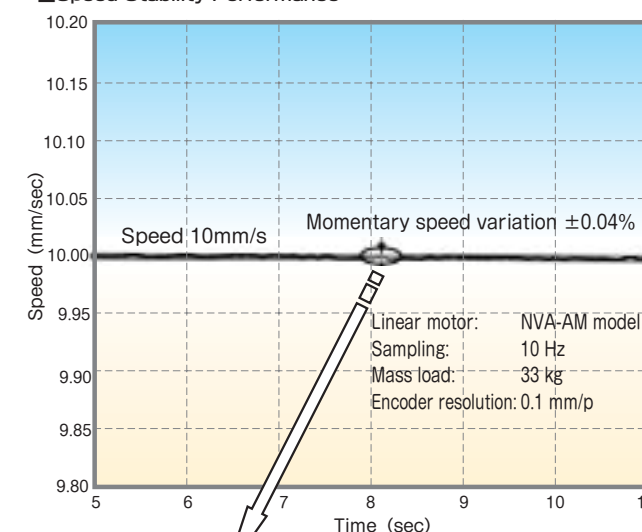

A position can be detected without a linear scale.
This function is best-suitable for long-stroke transportation. (For details, see p.21.)

Common Specifications

Item	Description
Ambient condition	Temperature 0-C to 40-C
	Humidity 85% or below (no condensation)
	Installation location Do not install the servo motor in any harmful atmosphere such as corrosive gas, cutting oil, metal dust, or oil.
Rating type	Continuation (S1)
Mounting method	Horizontal or vertical
Thrust method	Both directions
Cooling method	Natural air cooling
Insulation grade	F type
Insulation withstand pressure	1500 VAC (for one minute)
Vibration resistance	1 G (3 directions: 2 hours for each of them)
Shock resistance	NVA-AM/BM model/NLA-S/MA/NA model: 5 G (3 directions: 3 times for each of them)
	NVA-BL model/NLD-AM/FL model: 10 G (3 directions: 3 times for each of them)
Protection type	Open

Outstanding Speed Stability

Speed Stability Performance

※Depends on conditions such as the machine to be used.

τ Providing the maximum level speed stability with the τ Linear Servo motor and high-performance servo driver VC II combined

VC II series

T Linear Servo Motor Selection Guide

T Linear servo motor thrust list

Calculating the Required Magnet Base Length

Select the T Linear servo motor magnet base with the following calculation method:

Total of the magnet base lengths ≥ maximum mobile length + total coil unit length + required magnetic pole sensor length

The required magnetic pole sensor length is generated when the magnetic pole sensor unit is installed.
(It is not generated for automatic magnetic pole detection.)

The required magnetic pole sensor length depends on the t Linear servo motor type. For details of the required magnetic pole sensor lengths, see the table shown below.

T Linear servo motor type		Required magnetic pole sensor length (L)	
		Reverse direction (L1)	Forward direction (L2)
Flat type	NVA-AM model	13mm	40mm
High-thrust type	NVA-BM model	13mm	40mm
Large-thrust type	NVA-BL model	18mm	70mm
Standard type	NLD-AM model	25.5mm	70mm
Standard large-thrust type	NLD-FL model	21mm	81mm
Small-thrust type	NLA-S model	Only for automatic magnetic pole detection	
Core M type	NLA-MA model	14.5mm	50mm
Core N type	NLA-NA model	14.5mm	50mm

※The required magnetic pole sensor length depends on the coil unit operation direction after power-on.
Movement to L2 in the reverse direction is required as the reverse direction (L1) condition.

Calculating the Required Encoder Scale Length

Determine the linear encoder scale length and effective length from the following calculation methods:

◎Open type incremental encoder Renishaw-manufactured RGH-22/24 type

Tape scale length = Maximum mobile length + 40 mm (40 mm is the mounting allowance.)

◎Assembly type incremental encoder Mitutoyo-manufactured AT211 type

Open type absolute encoder Mitutoyo-manufactured ST701/702/703/704 type

Effective encoder length ≥ maximum mobile length

Magnetic Pole Detection Method

The magnetic pole can be detected with the automatic magnetic pole detection function (standard function, magnetic pole sensor unit unused) of our servo driver.

However, the automatic magnetic pole detection function may not operate normally depending on the condition used. So, it is recommended to use the magnetic pole sensor unit (option) for the following typical use conditions or when a use condition is unknown:

- The microscopic operation of automatic magnetic pole detection cannot be allowed.
- The microscopic operation of automatic magnetic pole detection is impossible (mechanical lock, and so on)
- Guide sliding resistance is very small (air guide, and so on)
- Guide sliding resistance, load resistance, and load mass are very large (total system load containing the guide and load resistance/linear motor peak thrust 1/5 times (actual value))
- Mechanical rigidity is low (cantilever axis structure, and so on)
- Structure has mechanical coupling and interference for multiple axes such as gantry drive and robot drive.
- Motor stroke direction is set to a direction other than the horizontal one.

NVA Series Coreless Type

■Features **Flat-Type NVA-AM Model Rated Thrust:23N to 135N**

Since the coil slide has the straddle structure, stable operation is realized from creep speed to high speed.

High-Thrust Type NVA-BM Model Rated Thrust:50N to 300N

Since magnetic flux density is made to be sufficient, the coil unit is compacted.

The freedom degree of mechanical design is improved substantially.

Large-Thrust Type NVA-BL Model Rated Thrust:540N to 900N

High-acceleration and high-frequency operation of the large load are possible without eliminating the coreless feature.

■Explanation of the Model Number

Motor Model Number

NVA-BM C 00 A2 A -S01

Coil Unit Model Number

CLV-BM C 00 A2 A -S01

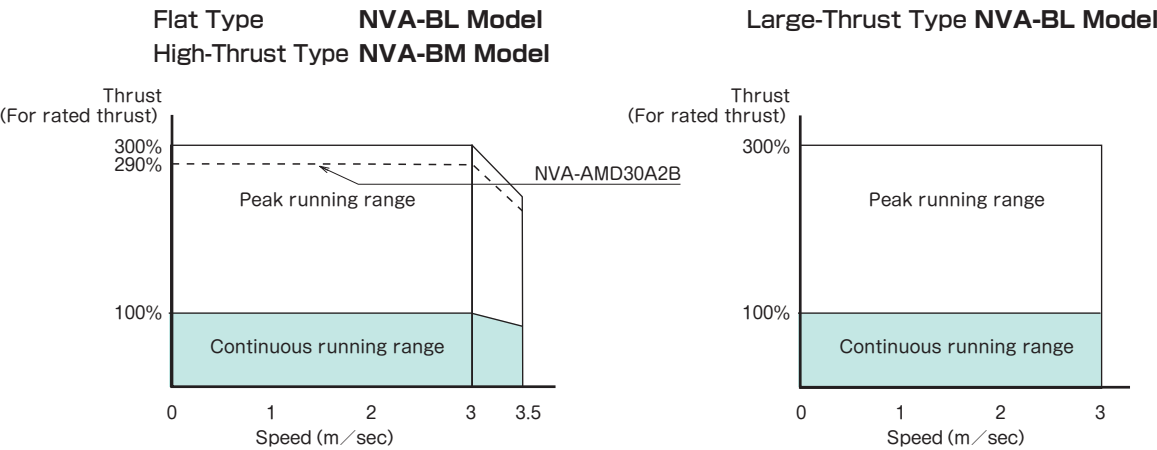

Magnet Base Model Number

MBV-BM B 00 A -S01

①	T Linear servo motor series name	NVA : NVA series CLV : NVA series Coil unit MBV : NVA series Magnet base
②	Motor type	AM : Flat, BM : High thrust, BL : Large thrust
③	Approx. coil unit length ※	A : 60mm, B : 120mm, C : 180mm, D : 240mm, E/F : 360mm, G : 480mm, H : 600mm
④	Total magnet base length	A/M : 96mm, B/R : 144mm
⑤	Subclassification	Motor/coil unit 30 : Mounting height (flat type) 00 : Lateral side mounting 01 : Underside mounting (only the high-thrust type)
		Magnet base 00 : Standard specification
⑥	Voltage specification	A2 : 200-VAC specification
⑦	Design order	A (1st version) ⇒B (2nd version) ⇒C...
⑧	Dedicated device number	None : Standard specification, S01 S02... : Dedicated device serial number

※ For details of the above values, see the respective external dimensions.

■Motor Characteristic Chart

Flat-Type NVA-AM Model

■Rating and Specifications

Motor model number	NVA-AM	A30A2B	B30A2B	C30A2B	D30A2B	E30A2B
Rated thrust	N	23	45	68	90	135

Maximum speed	m/sec	3.5 (see the motor characteristic chart.) ※1				
Power supply voltage specification	ACV	200 ※2				
Coil unit model number	CLV-AM	A30A2B	B30A2B	C30A2B	D30A2B	E30A2B
Magnet base model number	MBV-AM	Selected from A00B (96mm) / B00B (144mm)				
Combination driver	VC II series	NCR-□□	A□A2A-101D	A□A2A-201D	A□A2A-401D	A□A2A-801D※3
	VPS series	NCR-DC	□□A2B-401□	□□A2B-401□	□□A2B-401□	□□A2B-801□

※ The above specifications indicate the values generated when operation is performed with the heat sink (aluminum plate) installed in the coil unit at the ambient temperature of 25°C.

Heat sink size (mm): 250×250×15 (NVA-AMA/AMB/AMC30A2B model)
450×450×15 (NVA-AMD/AME30A2B model)

※1 The maximum motor speed is provided and the actual speed depends on the sensor resolution.
(See the table of the relationships between resolutions and speeds for each linear encoder unit on p.17.)

※2 The combination with the 100-VAC specification servo driver may be possible.
However, the rating is reduced. So, contact our sales representatives after clarifying the specifications.

※3 To fit the servo driver to the UL standard, it is necessary to set the continuous output current value of this combination driver within 5 A.
(Driver allowance: 6.8 A)

■External Dimensions

※1 The coil unit thrust direction is determined to be the forward direction for the cable side.
As the initial parameter value of our servo driver, the forward direction of the coil unit and that of the linear encoder (see p.17 to p.20) are defined as the same one.
If necessary, change the forward and reverse directions with parameters.

NLD Series Coreless Type

■Features Standard-Type NLD-AM Model Rated Thrust:50N to 200N

The economical coreless type linear has been realized with highly efficient magnetic arrangement.
The longer the stroke, the more economical.

Standard Large-Thrust Type NLD-FL Model Rated Thrust:320N to 1000N

The coreless large-thrust type provides up to 3000N of thrust force while supporting the standard type features.

External Dimensions

NLA Series Coreless and Core Types

Features Small-Thrust Type NLA-S Model Rated Thrust:7N to 13N

Small high-performance coreless type with magnet base width 38 mm and height 21 mm.
It is best suited for small high-precision stage construction.

Core Type NLA-MA Model Rated Thrust:250N to 750N
Core Type NLA-NA Model Rated Thrust:500N to 1500N

Thrust density is high, providing large thrust (maximum thrust 4500N).
The rigidity of the motor drive division is high. So, these types are best suited for high-speed positioning of large mass load.

Core Type NLD-AM Model

Rating and Specifications

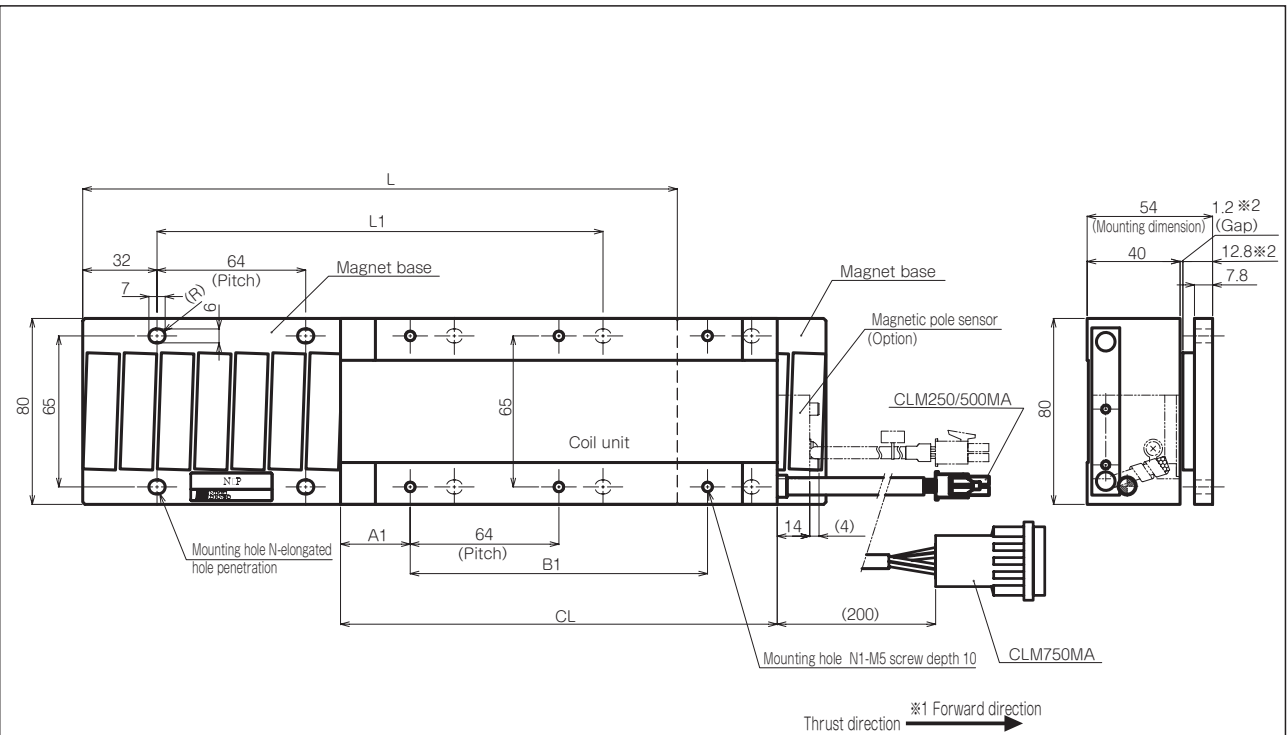

Motor model number		NLA-	250MAMA	500MAMA	750MAMA
Rated thrust		N	250	500	750
Maximum thrust		N	725	1250	2250
Rated output		A	3.4	6.8	10.2
Rated current		N	3000	6000	9000
Maximum speed		m/sec	2.5 (see the motor characteristic chart.) ※1		
Power supply voltage specification		ACV	200		
Coil unit model number		CLM	250MA	500MA	750MA
Magnet base model number		MBMA	Selected from 64A (63.8mm) / 256A (255.8mm)		
Combination driver	VC II series	NCR-□D	A□A2A-401B	A□A2A-801B※2	A□A2A-222B
	VPS series	NCR-DC	□0A2B-401□	□0A2B-801□	—

※ The above specifications indicate the values generated when operation is performed with the heat sink (aluminum plate) installed in the coil unit at the ambient temperature of 25°C.

※1 The maximum motor speed is provided and the actual speed depends on the sensor resolution. (See the table of the relationships between resolutions and speeds for each linear encoder unit on p.17.)

※2 To fit the servo driver to the UL standard, it is necessary to set the continuous output current value of this combination driver within 5 A.
(Driver allowance: 6.8 A)

External Dimensions

※1 The coil unit thrust direction is determined to be the forward direction for the cable side.
As the initial parameter value of our servo driver, the forward direction of the coil unit and that of the linear encoder (see p.17 to p.20) are defined as the same one.
If necessary, change the forward and reverse directions with parameters.
※2 When the magnet cover is mounted, the total height of the magnet base is 13 mm and the gap is 1 mm.

※ This drawing indicates that the optional magnet cover is not mounted.

Coil Unit

Model number	Rated thrust (N)	CL	A1	N1	Mass (kg)
CLM250MA	250	188	30	6	3.0
CLM500MA	500	348	46	10	6.0
CLM750MA	750	508	30	16	9.0

Magnet Base

Model number	L	L1	N	Mass (kg)
MBMA64A	64	—	2	0.5
MBMA256A	256	192	8	1.7

Relationships Between Resolutions and Speeds of Each Linear Encoder Unit

The maximum speed of the T Linear servo motor depends on the type and resolution of the linear encoder used. For details, see the following table.

Encoder type	Encoder resolution	T Linear servo motor series/type name							
		NVA series			NLD series		NLA series		
		Flat	High thrust	Large thrust	Standard	Standard large thrust	Small thrust	Core M	Core N
Open-type incremental Renishaw RGH-22	5 μm	3.5m/s	3.0m/s	3.5m/s	3.0m/s	2.5m/s (2.0m/s)	3.0m/s	2.5m/s	3.0m/s
	1 μm								
	0.5 μm								
	0.1 μm								
	0.05 μm								
Open-type incremental Renishaw RGH-24	20/1024 μm (20nm)								
	5 μm	3.5m/s	3.0m/s	3.5m/s	3.0m/s	2.5m/s (2.0m/s)	3.0m/s	2.5m/s	3.0m/s
	1 μm								
	0.5 μm								
	0.1 μm								
Open-type absolute Mitutoyo ST701/2/3/4	0.5 μm								
	0.1 μm								
Assembly-type incremental Mitutoyo AT-211	5 μm								
	1 μm								
	0.1 μm								

※ A speed in () is used when the combination driver is VPS series.
※1 For a VC II series combination driver, the maximum speed is 0.4 m/s when the command unit is used as 10 nm (minute positioning usage).

External Dimensions of Each Linear Encoder Unit

Open-Type Incremental Encoder Renishaw-Manufactured RGH-22 Type

※1 Dimension from the scale pasting surface (including the scale thickness)
※2 The output direction during encoder read head movement conforms to this drawing.
(If the combination driver is VC II series, forward and reverse directions can be changed with parameters.)
※3 For encoder resolution 20/1024 mm (20 nm), the connector shape is different because of connection to the interpolator unit (IPU) on p.18.

Open-Type Incremental Encoder Renishaw-Manufactured RGH-24 Type

※ There are two methods of fixing the reference mark: with adhesive (see A1 to A3 in the drawing) and the screw (see B1 to B3 in the drawing). Specify one of them.
※1 The output direction during encoder read head movement conforms to this drawing. (If the combination driver is VC II series, forward and reverse directions can be changed with parameters.)
※2 Dimension from the scale pasting surface (including the scale thickness)
※3 For encoder resolution 20/1024 mm (20 nm), the connector shape is different because of connection to the interpolator unit (IPU) shown in the drawing below.

Interpolator Unit (IPU) External Dimensions

This interpolator unit (IPU) is separately placed when resolution 20/1024 mm (20 nm) of the open-type incremental encoder is used.

Reverse direction (−) ← Read head movement direction ※1 → Forward direction (+)

Reverse direction (−) ← Read head movement direction ※1 → Forward direction (+)

Effective length (mm)	Maximum movement length (mm)	L1 (mm)	L2 (mm)	L3 (mm)	n	L4 (mm)	z
100	110	180	90	80	2		3

- ※1 The output direction during encoder read head movement conforms to this drawing.
(Forward and reverse directions can be changed with combination driver parameters.)
- ※2 When effective length L0 is 500 mm or more, the scale main body is fixed with the additional and attached intermediate support.
As shown in the drawing, there are two methods of mounting the intermediate support in each of mounting directions A and B.
During mounting, select each of them.
- ※3 A value in 5 in the model number indicates a resolution. (A: 0.1 mm, R: 0.5 mm, Y: 5 mm)

After inserting the τ Linear servo motor in the device, the positioning precision can be improved by incorporating the position data measured by a customer into the Nikki Denso servo driver as compensation data.

●The following is an example of actual measurement for the positioning precision when the absolute position correction function option is used in the 600 mm stroke 1-axis linear stage.

Positioning Precision:0.23 mm (for the 600 mm stroke)

Magnetic Sensor Units

External Dimensions

Cable Lengths

Scaleless Linear Sensors

A linear servo system requiring no linear scale can be constructed by magnetically detecting a position from the τ Linear servo motor. This linear servo system is best suitable for transportation.

Features

This system has superior environment resistance since no linear scale is used. It can be easily installed since no linear scale is adjusted. It provides better cost merit for a long stroke since no linear scale is used.

Mounting Dimension Drawing
NLD-AM Model

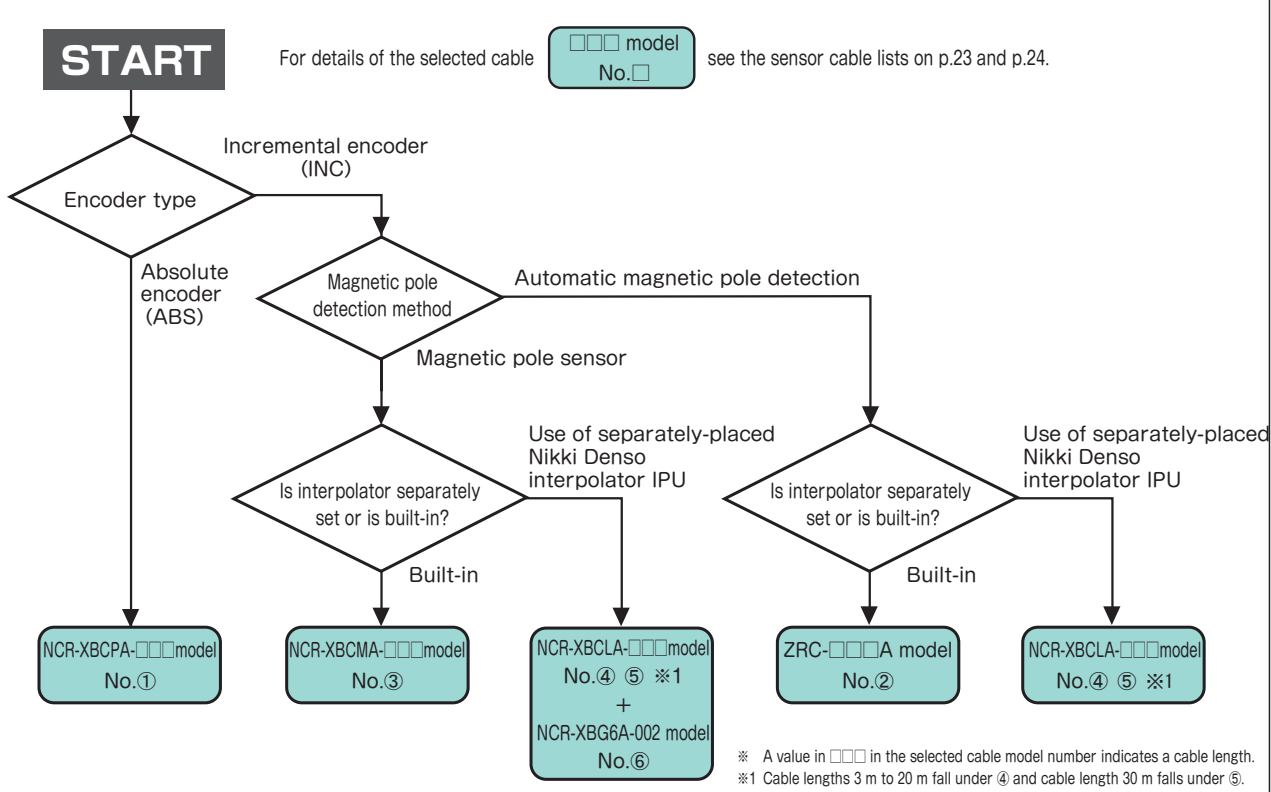

Applicable τ Linear Servo Motors and Positioning Resolutions

Applicable τ Linear servo motor	Positioning resolution
Coreless standard type (NLD-AM model)	40/8196 (approx. 4.9 mm)
Coreless flat type (NVA-AM model)	20/8196 (approx. 2.9 mm)

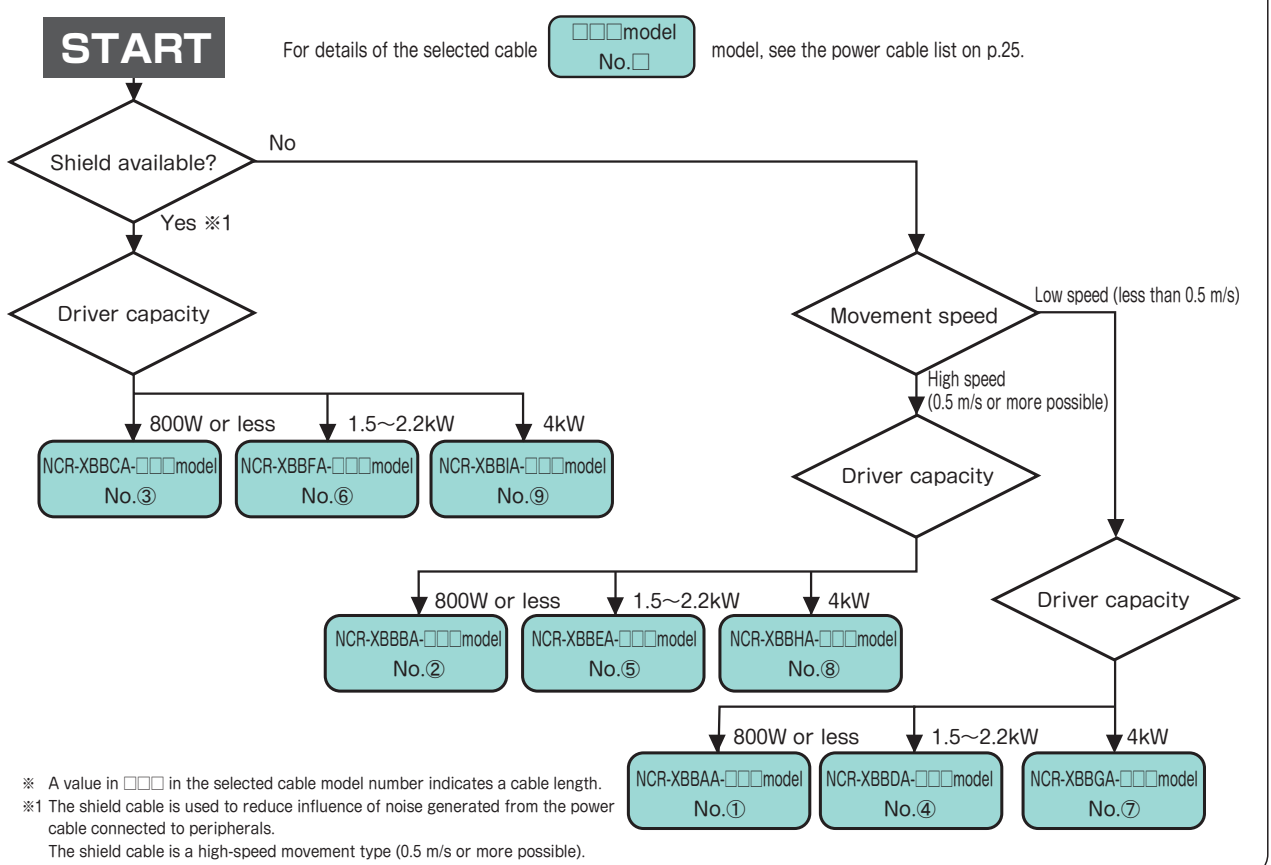

※ For further information about other supported τ Linear servo motors, contact our sales representatives.

※Other optional sensor cables

Encoder cables are also assorted which can be connected to open linear encoders manufactured by HEIDENHAIN. Check the model number and resolution of the cable used, and contact our sales representative. (Some cables cannot be used with the combination driver because of the relationship between the resolution and speed of the cables.)

Type	Cable model number	Length
Encoder : INC	NCR-XBCZA-030	3m
Interpolator : Built-in	NCR-XBCZA-050	5m
Magnetic pole detection :	NCR-XBCZA-100	10m
Magnetic pole sensor	NCR-XBCZA-150-Z	15m
	NCR-XBCZA-200-Z	20m

※15 m and 20 m are used for external power supply (+5 VDC) type.

AC Servo Driver/Controller

VC II Series

VC II - Type D

High performance driver
Pulse train control, speed control, torque control,
simple positioning, and mode selection

VC II -Type C1

Program positioning controller
Built-in program positioning, speed, torque,
and other functions

VC II -Type C6

Free curve controller
Free curve motion enabled

- RoHS Satisfied
 - Conforming to CE Marking (all models) and UL/cUL (up to 800 W)
 - Network-Compatible (option)
- Field network : <<CC-Link>>·<<DeviceNet>>
Motion network : <<SSCNET III>>·<<MECHATROLINK-III>>

High performance servo driver series that maximizes motor performance from high response operation to ultralow operation "Versatile servo driver series" including the controller type with the program positioning control function (VC II -C1) or free curve control function (VC II -C6)
Stage positioning accuracy ensured by using the absolute position compensation function option

AC Servo Driver

VPS Series

I/O Type

CC-Link Type

Equipped with a CC-Link interface as standard

- RoHS Satisfied
- Conforming to CE Marking and UL/cUL

Servo driver series developed in pursuit of user friendliness and cost performance
Equipped with 7-point positioning and zero return functions as standard
Stage positioning accuracy ensured by using the absolute position compensation function option

General Specifications

Item		Specification
Ambient conditions	Temperature	Operating temperature : 0℃ to 55℃ 0℃ to 50℃ (to comply with UL standards) Storage temperature : 20℃ to 60℃※
	Humidity	85% or less with no condensation ※
	Installation place	Do not install the stage in any harmful atmosphere such as corrosive gas, cutting oil, metal dust, or oil.
	Altitude	1000 m or less
Cooling method		When the capacity is 800 W or less : Natural cooling When the capacity is at least 1.2 kW : Forced air cooling
Mounting orientation		Mounted on a panel
Vibration resistance		0.5G (10~50Hz)
Impact resistance		5G
Noise tolerance		FT/B : ±2000 V (Frequency: 5/100 kHz Cycle: 300 ms) for one minute
		Radiation noise : ±1000 V (50 ns, 10 cm) for one minute
		Electrostatic noise : ±10 kVA (between the ground and housing)

※ : Avoid use under a high temperature or humidity condition since the life largely varies depending on the temperature and humidity conditions.

Function Specifications

Item		Specification		
Type		VC II-D (NCR-DDAO)	VC II-C1 (NCR-CDA1)	VC II-C6 (NCR-CDA6)
Number of controlled axes		1		
Encoder feedback input frequency		25 Mpps (quadruple of the encoder pulse frequency, however)		
Run mode		Speed control, torque control, pulse train control, and simple positioning	Auto, manual, zero return, and pulse train	Auto, manual, zero return, and servo lock
Command input system	VC II - type D/C1 Pulse train command VC II - type C6 Master axis position command	①90°different phase pulse ②Directional pulse ③Directional signal + feed pulse		
		«Line driver or open collector output (option) available. However, the line driver method is recommended for reasons of noise.»		
		«Maximum input frequency: 6.25 Mpps»		«Maximum input frequency:5 Mpps»
		«Be careful about noise since the same GND is used for the line receiver input»		
	Analog command	④Servo control communication		⑤Internal master axis command
		-		
	Internal command	Speed control run and torque control run	-	
	DC -10V~ +10V,input resolution 14bit			
	Simple positioning/zero return/manual run with internal pulse train commands	Program run with 280 internal stored data items (addresses 0 to 255 set by control signals)		
Main functions	Common to each type	Zero return run, manual (jog) run, serial communication run, self-diagnosis, torque limit, and electronic thermal		
	For each type	Pulse train run, simple positioning, and pulse train command compensation	Pulse train run, program run, (positioning, simple continuous positioning, external trigger positioning, four arithmetic/logic operations, timer, unconditional/conditional jump, subroutine, and spinner control), electric gear ratio set, and backlash compensation	
			Program run (continuous control)	Program run (free curve control)
Acceleration/deceleration pattern		Linear acceleration/deceleration and S-curve acceleration/deceleration		
Auto-tuning function		Available, by parameter setting, even when the inertia ratio is a little high		
Gain selection function		①Can select four types of gain by combining GSEL signals.		
		②Can also select position loop gain.		
Control input signals (external input signals, eight basic signals) ※ 1		Servo ON (SON※), reset (RST), mode select (MD1 and MD2), command pulse input inhibit (CIH※), emergency stop (EMG※), proportion control (PC), forward jog (FJOG), reverse jog (RJOG), zero point deceleration (ZLS), speed override (OR1 to OR4), deviation clear (CLR), forward overtravel (FOT※), reverse overtravel (ROT※), gain select (GSEL), gain select 2 (GSEL2), forced brake ON (BRON), and torque limit (TL)		
		Drive (DR), speed/torque select (SS1 and SS2), simple positioning start (PST), address set (PS1 to PS3), zero return (ORG), and command direction select (SSD)	Auto start (PST), address set (PS1 to PS8), hold (HLD), external trigger (TRG), M complete (MFIN), program cancel (PCAN), block stop (BSTP), external auto start inhibit (EPIH), and jog speed change (JOSP)	
			Command direction select (SSD)	Phase lead (D11), phase delay (D12), electronic clutch (D14), master axis select (D18), cycle end (D21), pattern select (D22/D24/D28), and internal master axis speed select (MSSP)
Output signals (four basic signals) ※ 1		Servo ready (RDY), alarm (ALM※), warning (WNG※), positioning complete (PN), in torque limit (LIM), speed zero (SZ), break release (BRK), software limit switch (SLSA and SLSB), and encoder marker (OCM)		
		In speed run (SMOD), in torque run (TMOD), in simple positioning run (NMOD), and in pulse train run (PMOD)	Rough matching (PRF), program end (PEND), auto run ready (PRDY), in manual run (MMOD), in auto run (AMOD), in zero return run (HMOD), M strobe (MSTB) general output (OUT1 to OUT8), and M output (MO1 to MO80)	
			In pulse train run (PMOD)	Electronic clutch stop (FCRP), in free curve run (FC), master axis speed zero (MSZ), in servo lock (PMOD)
Encoder pulse output		90- different phase pulse train output (can be output at a divided frequency. The maximum output frequency of the two signals, phase A and B signals, is 20 Mpps when the encoder pulse frequency is quadrupled.)		
Operation and display functions		The LCD module on the front panel or optional SDI device allows the user to input various types of data and display various statuses.		
Filter functions		Notch filter, torque command filter, disturbance compensation filter, and vibration filter		
Monitor functions		①Displays the control signal status in the signal display section on the LCD module on the front panel or optional SDI device. ②Displays various types of operation status and setting status (data), and detected error history in the data display section on the LCD module on the front panel or optional SDI device. ③Analog monitor Two types of operation status (Can monitor two types of operation status selected using the relevant parameter.) ④USB-compatible. Can monitor various types of data using a dedicated editor (option).		
Data retention function		Retains the following data in non-volatile memory. (The non-volatile memory can be rewritten up to 10000 times.): Parameters and alarm history (The last five history items are retained. If any of the five items is the same as the last generated alarm, it is not registered.)		
Protective functions		Provided against the following items: IPM fault, overvoltage, undervoltage, overspeed, overload (electronic thermal), overload on the regenerative resistor, deviation overflow, communication, error, data error, CPU fault, encoder fault, automatic magnetic pole detection error, absolute encoder fault, etc.		
Communication functions		Can transmit and receive various types of data by serial communication (RS-422A).		
		Can communicate with the dedicated editor through USB (compliant with the 1.1 and 2.0 standards).		

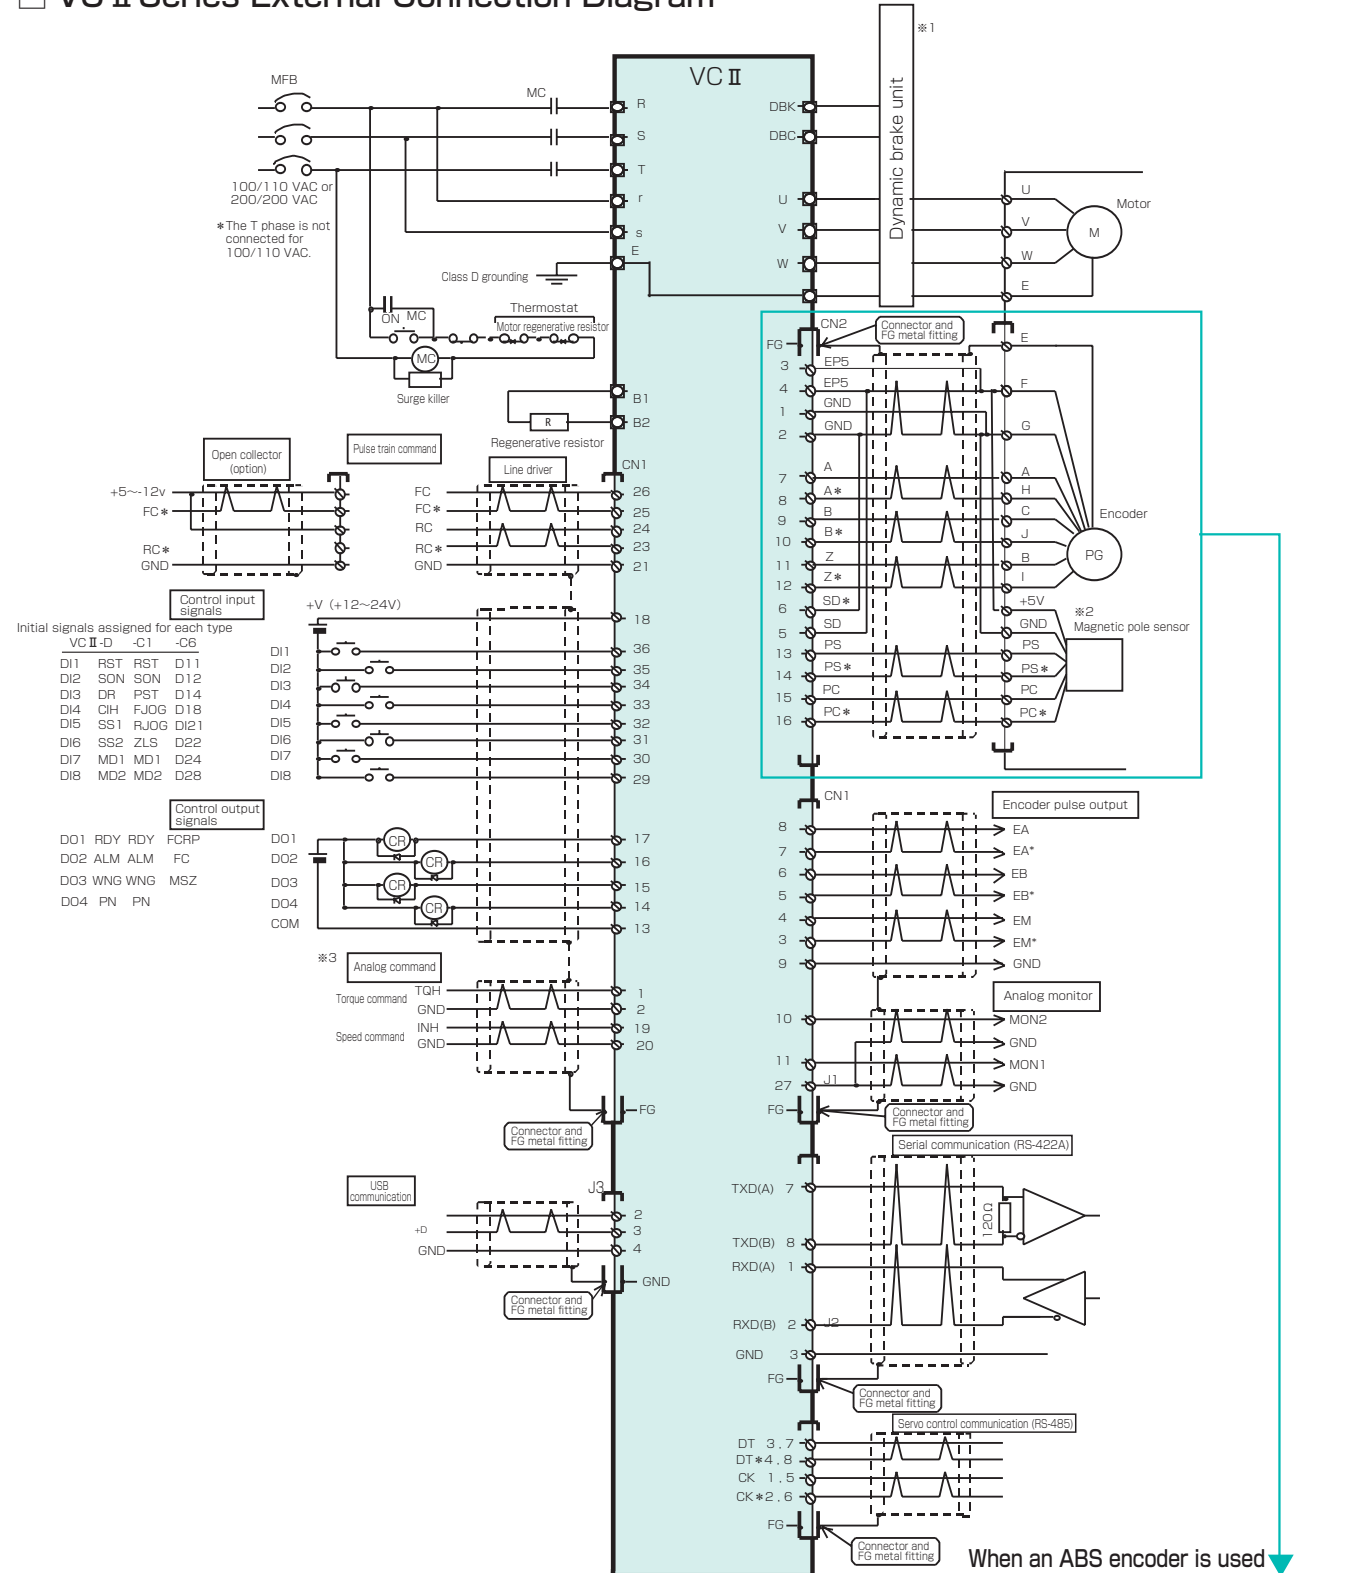

※1:For the initial signals assigned for eight external input and four output signals, see "External Connection Diagram" on p.29.

For other than the initial signals, signals can be assigned by remote control or external I/O signal assignment.

An asterisk (*) attached to a signal code indicates negative logic. An asterisk (*) enclosed with parentheses indicates a signal of which logic can be changed by parameters.

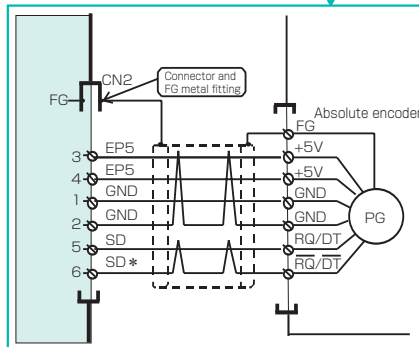

VC II Series External Connection Diagram

- ※1 : The dynamic brake unit is optional.
 ※2 : Connected when a magnetic pole sensor is used.
 ※3 : The VC II-C6 type is not supported.

Notes) · Prepare a power supply at the specified voltage and current for the control input signals.
 · In connector CN1, COM is common to control I/O signals and GND is common to the internal control power supply (+5 V).
 · COM and GND in CN1 are isolated, so do not put them in common cables or bundles.
 · The status of the switch connected to each control input signal indicates the OFF condition of the signal.
 · Pins not described in this diagram are NC.
 · Connect GND for the pulse train command when the line receiver is input.

When an ABS encoder is used

 ※2 : Choose a circuit breaker model having a sufficient shutdown capacity that can conduct protective coordinate with the power supply capacity.
 ※3 : Mass used when no option is installed.

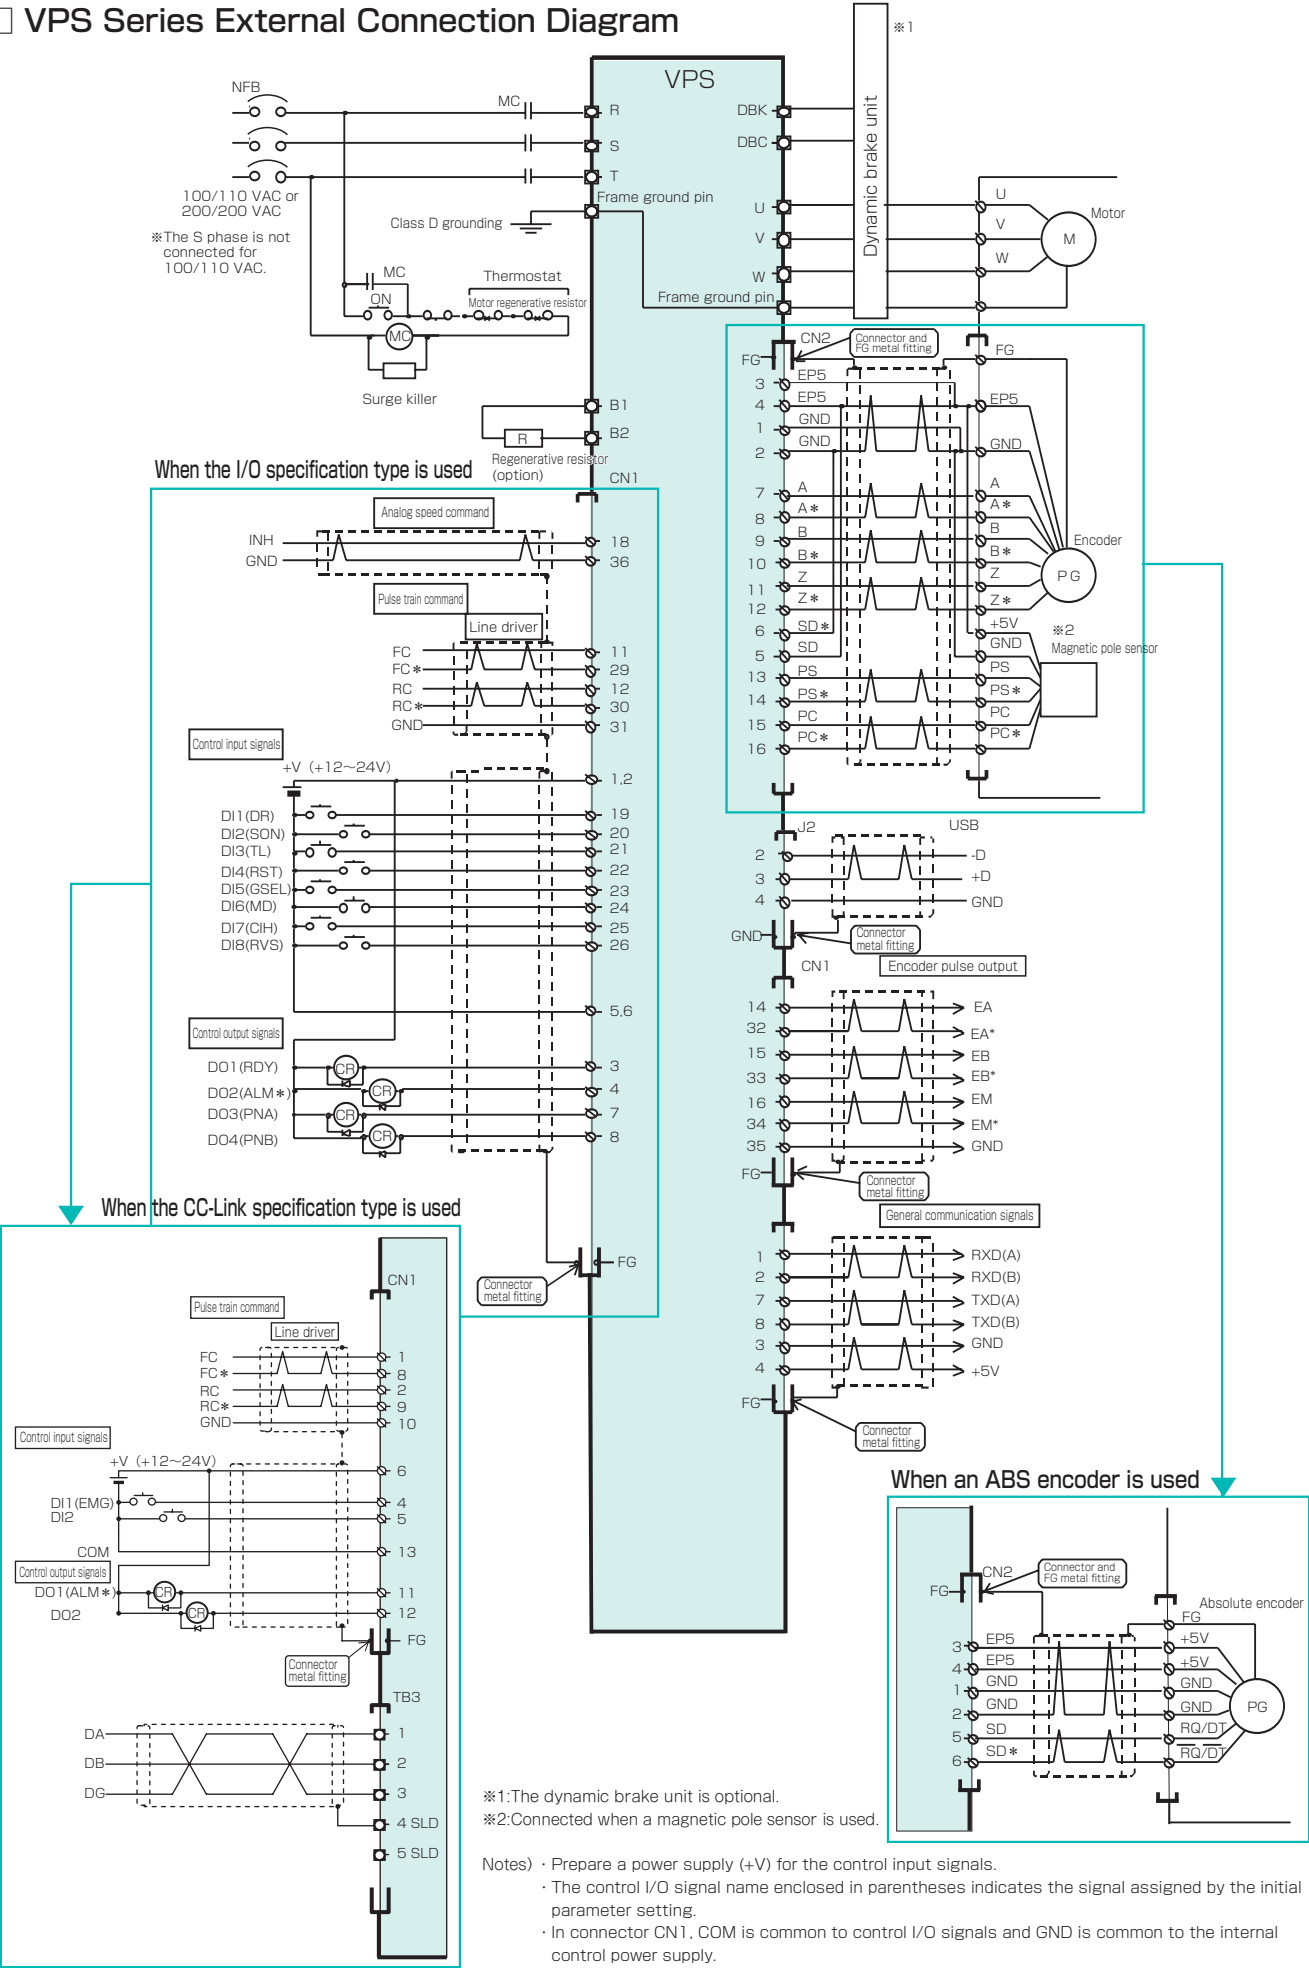

□ VPS Function Specifications

Item		Specification	
Type		I/O specification (NCR-DCCO)	CC-Link specification (NCR-DCDO)
Number of controlled axes		1	
Encoder feedback input frequency		16 Mpps (quadruple of the encoder pulse frequency, however)	
Run mode		Speed control and pulse train	
Command input system	Pulse train command	①90°different phase pulse ②Directional pulse ③Directional signal + feed pulse «Line driver output available. The maximum input frequency is 4 Mpps.»	
	Analog command	Speed control run DC -10V~ +10V, input resolution 13bit	-
	Internal command	Positioning (7 points)/zero return/manual run with internal pulse train commands	
Main functions		Speed control run, pulse train run, zero return run, manual (jog) run, torque limit, self-diagnosis, electronic thermal, and auto-tuning function	
Acceleration/deceleration pattern		Linear acceleration/deceleration and S-curve acceleration/deceleration (by using the command averaging function)	
Gain selection function		Speed gain switching among three types (normal, low-speed, and change with GSEL)	
Control input signals (eight external input signals) ※		Drive (DR), servo ON (SON(*)), reset (RST), mode select (MD), command pulse input inhibit (CIH), emergency stop (EMG), command select (SS1 to SS3), forward jog (FJ), reverse jog (RJ), zero point deceleration (ZLS), forward overtravel (FOT), reverse overtravel (ROT), gain select (GSEL), torque limit (TL), internal pulse start (ZST), zero point marker (ZMK), command direction reverse (RVS), and command data reflection inhibit (NRF)	
		Current position data output request (APRQ), alarm code output request (ALRQ), and ABS data output request (ABRQ)	-
Output signals (four basic signals) ※		Ready (RDY), alarm (ALM), deviation range A (PNA), deviation range B (PNB), speed zero (SZ), break release (BRK), marker output (OCEM), in emergency stop (EMGO), and zero return complete (HCP)	
Encoder pulse output		90° different phase pulse train output (can be output at a divided frequency. The maximum output frequency of the two signals, phase A and B signals, is 7.99 Mpps when the encoder pulse frequency is quadrupled.)	-
Operation and display functions		The operation panel on the front panel allows the user to display various statuses, edit parameters, and execute self diagnosis.	
Filter functions		Notch filter and torque command filter	
Monitor functions		①Displays a selected item including alarms, speed, torque, deviation, speed command input, input signals, and parameter status on the data display LEDs (four 7-segment LEDs) on the front panel. ②USB-compatible. Can monitor various types of data using a dedicated editor (option).	
Protective functions		Provided against the following items: IPM fault, overvoltage, undervoltage, overspeed, overload(electronic thermal), overcurrent on the regenerative resistor, deviation overflow, RAM error, encoder fault, magnetic pole detection error, DSP error, etc. Can display the last five alarm history items.	
Communication functions		Can transmit and receive various types of data by serial communication (RS-422A) or CC-Link.	
		Can communicate with the dedicated editor through USB (compliant with the 1.1 and 2.0 standards).	

※ : For the initial signals assigned for eight input and four output signals, see "External Connection Diagram" on p.34.
※ : For other than the initial signals, signals can be assigned by external I/O signal assignment or can be used for communication and CC-Link. (For CC-Link, OCEM can be used only as an external output signal.)
※ : The status of control input signals can be fixed.
※ : The logic of control output signals other than OCEM can be changed when they are assigned as external output signals.

⑨	I/O cable (for the CC-Link specification type VPS unit)		NCR-XBA5A-□□□	Cable lengths : 1 m, 2 m, and 3 m Open at either end
⑩	I/O connector kit (for the CC-Link specification type VPS unit)		ZCK-COM	
⑪	Zero-phase reactor for protection against noise		NCR-XAB4A	For the common mode
⑫	Choke coil for protection against noise		NCR-XAC2A	For the normal mode Connected to U, V, and W in series.
⑬	Chalk coil terminal block		261-206	6 terminals
⑭	Dynamic brake unit		NCR-XABCA2A-801-UL	For external dimensions, see p.37.

※ □□□ in the cable model number indicates the cable length. Example : 5m ⇒ 050
※ For external dimensions and details of each optional product, refer to "VPS Series Option Manual".

Regeneration Resistors (Accessories)

Servo driver type used		Attached regeneration resistor		
		Model number	Specification/quantity	External dimensions
VC II series	NCR-□□□A1A-051□/101□	None	※	
	NCR-□□□A2A-201□/401□	None	※	
	NCR-□□□A2A-801□	CAN60UT 82 ohm J	Cement resistance 60W 82Ω × 1 resistor	①
	NCR-□□□A2A-152□/222□	CAN200UT 24 ohm J	Cement resistance 200W 24Ω × 1 resistor	②
	NCR-□□□A2A-402□	CAN400UR 20 ohm J	Cement resistance 400W 20Ω × 1 resistor	③
VPS series	NCR-DC□□A1B-201□	None	※	
	NCR-DC□□A2B-401□	None	※	
	NCR-DC□□A2B-801□	CAN60UT 82 ohm J	Cement resistance 60W 82Ω × 1 resistor	①
	NCR-DC□□A2B-162□	CAN200UT 39 ohm J	Cement resistance 200W 39Ω × 1 resistor	②

※ If a regeneration resistor is required, CAN60UT82 ohm J (60 W/82 Ω/1 resistor) is available as an option.

External Dimensions

(Unit : mm)						
External dimensions	L1	L2	W	H	L3	D
①	115	100	20	40	5	4.3
②	215	200	26	50	8	5.3
③	265	250	33	61	13	5.3

Dynamic Break Unit (Option)

The dynamic break unit is an auxiliary one used as an auxiliary braking unit to reduce a motor speed. It can prevent a connected motor from freely running due to an error in or electric outage of the driver main body. The model number and external dimensions depend on the device capacity of the servo driver used.

Servo driver model number used		Combination dynamic brake unit model number
VC II series	NCR-□□DA□A1A-051□/101□	NCR-XABCA2B-801-UL
	NCR-□□DA□A2A-201□/401□/801□	
	NCR-□□DA□A2A-152□/222□	NCR-XABCA2B-222-UL
	NCR-□□DA□A2A-402□	NCR-XABCA2B-402-UL
VPS series	NCR-DC□□A1B-201□	NCR-XABCA2B-801-UL
	NCR-DC□□A2B-401□/801□	
	NCR-DC□□A2B-162□	NCR-XABCA2B-222-UL

Direct Drive Product Lineups
Nikki Denso Offers

First direct drive servo motor that has satisfied stable performance at low speed, high takt operation, stable driving with high inertia, and other needs
TDISC Series developed as a pioneer pursuing performance

[D Series]

Low-Profile High Performance Type

Features	Overwhelming thickness of 44.5 mm that is provided by high magnetic flux density High performance direct drive servo motor having exceptionally stable performance at constant speed and machine accuracy including runout.
Rated torque	2~200N·m
Applications	Wafer chamfering, precision θ-axis, camera platform, electronic drawing machine, and so on

High Torque Type

Features	Large capacity direct drive servo motor which achieves stable positioning with high inertia load
Rated torque	500~3000N·m
Applications	(Maximum torque : 1000 to 5800 N·m) Large liquid crystal substrate alignment, roll coater, screen printer, and so on

[HD Series]

Fast Response Type

Features	Fast response direct drive servo motor developed in pursuit of fast response performance with excellent stability that satisfies both high torque and low inertia structures in a higher state and has high motor rigidity
Rated torque	21~115N·m
Applications	High-speed indexing, handler, and so on

[ND-c/ND Series]

Standard Type

Features	Direct drive providing cost and easy-to-use features that widely support various applications such as transportation, positioning, and indexing
Rated torque	2.4~500N·m
Applications	Liquid crystal transfer, index device, picking and placement, and so on

Unique round type linear servo motor for which magnets are mounted only at the required angle
Direct drive servo motor optimum for alignment applications

Limited Operation Angle Type

Features	Circular operation only within the required operation angle enabled by combining arc magnet bases. Direct drive servo motor optimum for high precision positioning with high inertia load including alignment of a large FPD substrate by direct driving within the required angle.
Operation radius	825mm/1525mm
Applications	Large liquid crystal substrate alignment device

One-Rotation Available Type

Features	Round type direct drive servo motor capable of one rotation by connecting eight 45-degree magnet bases In this case, the bore radius is 250 mm, which is optimum for driving requiring a hollow structure.
Operation radius	178mm
Applications	Wafer inspection device, liquid crystal substrate alignment device, and so on

Rich lineups are assorted to support custom-made orders from high-precision types having positioning precision 1 mm guarantee to cost performance types using scaleless linear sensors

High-Precision Linear Stage

Features	Speed stability is guaranteed with speed variation measurement back data. High takt operation is confirmed by setting the gain adjustment and resonance filter. Positioning precision is guaranteed with the absolute position correction function. High-precision direct drive DISC can be installed in the θ axis in addition to the X/Y stage. Various custom-made orders are supported in addition to the multi-head stage.
----------	---

Stage Block

Features	Substantial cost down is achieved with the scaleless linear sensor. The direct drive DISC series is prepared for the θ axis to enable the X/Y/θ/XYθ stage to be easily constructed.
----------	--

For details of each series, see each product brochure.

Details of Warranty

Warranty period of our products is one year after shipment from our factory.

However, please note that any failure or abnormality resulting from the following causes will not be covered by the warranty.

- ⊙ Modification by parties other than CKD Nikki Denso.
 - ⊙ Any non-standard operation that is different from rules and regulations stipulated by this catalog or our manual.
 - ⊙ Natural disasters.
 - ⊙ Connection with another maker's unit which is not approved by CKD Nikki Denso.
- Warranty of the device is limited for repairing only. Any damage caused by the fault of delivered device, or lost opportunity on the customer's side, profit loss, secondary damage, and accident will not be covered.

Cautions

- ⊙ The products may be damaged if it is hit or dropped. Please handle carefully.
- ⊙ Please make sure to install the safety device in case the product is used in the system that may have a serious accident or loss if the product is failed.
- ⊙ Since the unexpected noise, electrostatic, or incase of abnormal failure of input power source, wiring, and parts may be occurred although we put our effort to keep the product quality, please consider the fail-safe design and the safety in the range of movement before use.
- ⊙ Please read the instruction manual carefully and understand fully before use the product.
Also, please pay attention to the cautions mentioned in the manual.
- ⊙ In the product, strong magnets are used. Please do not stand near by the product if you have the pace maker device in the heart in order to avoid serious accident.
- ⊙ Please make sure to unplug the all power supply cables before installing, checking, and maintenance of the product. Also, please make sure to take measures such as safety plug or locking the power supply cables to avoid re-inputting the power other than the operator.
